

The real ESI – dedicated to the independent retailer

ESI s.p.a. was one of the first Italian companies to believe and invest in the field of natural products.

Established in Genoa in 1975 by chairman Dr Antonio Maria Galleano, ESI started by producing and marketing phytotherapeutic products such as tablets, capsules and vegetable extracts. Later it began developing dietary products.

In 1992, the company moved to Albissola Marina, just outside Genoa, in order to extend production and at present the plant covers an indoor area of 19,000 sq m dedicated to production, administration and marketing.

The ESI objective is to help improve the health and general well-being of individuals through its high quality products.

Its aim is to become a centre of excellence and expertise in the field of phytotherapy and dietary supplementation, successfully competing with all major contributors in the field of health.

ESI is proud of the expertise it has developed during the last 30 years, which has grown thanks to a constant interest

in researching appropriate and innovative products and the strict selection and rigorous checks of raw materials.

As a result, ESI has become one of the main manufacturing companies in the field of natural products. The expertise and technology developed by ESI guarantees the highest quality at all production stages, from manufacturing through to the packaging of the finished product.

Today, ESI plays a leading role in the field of phytotherapy both in Italy and abroad. It is also the most international Italian company in this field around the world.

Currently, its products are distributed in the UK and Ireland exclusively by Sally Thornley-Nash and her vastly experienced and knowledgeable sales team, who between them have over 40 years experience in the health food industry.

Our people

ESI employs around 120 staff, with founder Dr Antonio Maria Galleano remaining as chairman.

His son Marcello is vice-chairman and together they hold 100% of the company shares.

A total of 40 employees, coordinated by a Technical Manager and a Quality Assurance Manager, report to plant management while a further 10 work under administrative management.

There are also 70 employees who report to the sales management – 10 working within the company and the other 60 acting as agents supporting health food retailers.

The ESI pedigree

An increasingly competitive marketplace, along with a more informed and demanding customer base means businesses like ESI need to be able to guarantee quality.

Its commitment to quality has been recognised numerous times. In 1995 it obtained a Department of Health licence to produce both dietary products and supplements and in 1999, it was awarded ISO 9001 certification, making it the first

Italian company in its field to receive this accreditation.

Then in 2002, ESI's quality control system was updated to European ISO 9001: 2000 rules.

ESI is on the cutting edge in the dietary/health field and has fulfilled its customers' need for global quality by following a philosophy of certifying quality.

This includes complying totally with HACCP system rules and holding the ISO 9001 Certification, which guarantees total quality.

In addition, its Quality Control Laboratory is equipped for physical, chemical and microbiological analysis of raw materials, production intermediates and the finished product. [HFB](#)
